JOÃO GOMES

Software developer - iCligo
Aveiro / Coimbra / Porto / Viseu

Full-Stack Software Engineer experienced in Java (8–22), Spring Boot, microservices, and frontend development with TypeScript and Angular. Worked on large-scale enterprise systems at Deloitte and iCligo, building scalable backends, event-driven pipelines, secure architectures, and well-tested, production-ready applications.

At Deloitte, contributed to BMW and Mercedes enterprise platforms by building Spring Boot microservices and Angular/TypeScript frontend components, integrating Kafka-based event pipelines, optimizing performance, and delivering maintainable, well-tested solutions using PostgreSQL.

At **iCligo**, Developed backend services for a travel platform using Java, PostgreSQL, MongoDB, Temporal, and EventStore. Contributed to new features, microservice design, and system reliability, and led a crypto-shredding–based encryption initiative to improve security and compliance.

Experienced in Agile and SAFe, with a strong focus on problem-solving, teamwork, and building robust, production-ready software.
